Hello Everyone!

In my opinion, System76 Darter Pro is a good choice for Joseph because it already comes with Pop_OS, so he can start using it without installing anything. It has an Intel Core Ultra 5 processor, 32 GB RAM, and a 1 TB SSD, which is strong enough for virtualization, programming, and light video or photo editing. The Intel Arc graphics can run light games like Guild Wars 2 and also work well for watching movies and streaming. It has all the ports he needs, including USB 3.0, ethernet, HDMI/DisplayPort, and Thunderbolt. The laptop is also light, around 3.5 pounds, so it is easy to carry for a student. The price is \$2,004, which is under Joseph's \$2,500 budget and gives him very good value.
